Product Requirement Document

RechargeMate

Product Requirement Document (PRD)

Document ID: PRD-20261025

Version: 1.0

Date: 25-Oct-2026

Status: Draft

Target Audience: Prepaid mobile users, Telecom operators, Payment gateway providers

1. Overview

RechargeMate is a mobile application designed to simplify the process of recharging prepaid mobile accounts. The app aims to provide a seamless, secure, and user-friendly experience for users to top-up their mobile credits across various telecom operators. By integrating multiple payment gateways and offering a wide range of recharge options, RechargeMate seeks to become the go-to solution for mobile users who require quick and reliable recharge services.

Problem Statement:

The product must address the operational inefficiencies faced by its target users by consolidating essential workflows into a single structured platform and reducing manual effort, information gaps, and delays.

2. Objectives

- Achieve a 95% user satisfaction rate within the first year.

- Support recharge services for at least 10 major telecom operators.

- Ensure 99.9% uptime for all critical services.

- Integrate with at least three major payment gateways.

Success Measures:

- Improved productivity and reduced operational delays

- Higher user satisfaction and adoption among core stakeholders

- Better quality, consistency, and timeliness of service delivery

3. Scope

In Scope:

- FR-001 - User Registration and Authentication (Critical)

- FR-002 - Mobile Number Recharge (Critical)

- FR-003 - Payment Gateway Integration (High)

- FR-004 - Transaction History (Medium)

- FR-005 - Multi-language Support (Medium)

- FR-006 - Push Notifications (High)

Out of Scope:

- Postpaid Bill Payments: The initial version of the app will focus solely on prepaid recharge services to streamline development and focus on core functionalities.

- In-app Chat Support: Customer support will be handled via email and external chat services to reduce complexity in the initial release.

4. Users and Personas

- Prepaid mobile users

- Telecom operators

- Payment gateway providers

5. Functional Requirements

FR-001 - User Registration and Authentication (Critical)

Target Persona: Prepaid mobile users

Description: The app must allow users to register using their mobile number and authenticate via OTP (One-Time Password). Users should also have the option to log in using social media accounts such as Google or Facebook.

Business Value: The feature provides measurable value by improving operational efficiency, reducing errors, and supporting the user workflow.

FR-002 - Mobile Number Recharge (Critical)

Target Persona: Prepaid mobile users

Description: Users must be able to recharge their mobile numbers by selecting their telecom operator, entering the mobile number, and choosing a recharge amount. The app should display available plans and offers from the selected operator.

Business Value: The feature provides measurable value by improving operational efficiency, reducing errors, and supporting the user workflow.

FR-003 - Payment Gateway Integration (High)

Target Persona: Prepaid mobile users

Description: The app must integrate with multiple payment gateways (e.g., PayPal, Stripe, local banks) to facilitate secure transactions. Users should have the option to save their payment details for future transactions.

Business Value: The feature provides measurable value by improving operational efficiency, reducing errors, and supporting the user workflow.

FR-004 - Transaction History (Medium)

Target Persona: Prepaid mobile users

Description: Users should be able to view their past transactions, including details such as date, amount, and status of each recharge.

Business Value: The feature provides measurable value by improving operational efficiency, reducing errors, and supporting the user workflow.

FR-005 - Multi-language Support (Medium)

Target Persona: Prepaid mobile users

Description: The app must support multiple languages to cater to a diverse user base. Initially, it should support English, Spanish, and Mandarin.

Business Value: The feature provides measurable value by improving operational efficiency, reducing errors, and supporting the user workflow.

FR-006 - Push Notifications (High)

Target Persona: Prepaid mobile users

Description: The app should send push notifications to users for successful recharges, failed transactions, and promotional offers.

Business Value: The feature provides measurable value by improving operational efficiency, reducing errors, and supporting the user workflow.

6. Constraints

- The app must comply with PCI DSS standards for handling payment information.

- The system should be scalable to handle up to 1 million transactions per day.

- User data must be encrypted both at rest and in transit to ensure privacy and security.

- The app should be compatible with Android 8.0+ and iOS 12.0+ devices.

Dependencies:

- Access to required data sources and system integrations

- Available technical infrastructure and deployment environment

- Stakeholder review and timely feedback during implementation

7. Risks and Assumptions

- Risks: integration complexity, data quality issues, security and compliance requirements, schedule constraints, and change in stakeholder priorities.

- Assumptions: required data will be available, users will participate in validation activities, and the platform will be implemented within the agreed delivery timeline.

Open Questions:

- Final list of integrations to be included in the initial release

- Compliance requirements and approved hosting environment

- User training and rollout timeline

8. Approval
